

# FACETS OF DATA

## Data Science Lifecycle (FLOW)

 1. Problem Definition  
Understand the Problem

 2. Data Collection  
Gather data from various Source

 3. Data Preprocessing  
Clean, transform & Prepare the data

 4. Exploratory Data  
Explore & visualize data

 5. Model Building  
Apply algorithms to build

 6. Model Evaluation  
Evaluate Performance

 7. Deployment  
Deploy the model

## DEFINITION

→ Data Science is an interdisciplinary field that access the scientific methods, Processes, algorithms and systems to extract knowledge and insights from structured and unstructured data.

→ It combines principles from statistics, Computer science, Mathematics and Domain knowledge to

Solve real-world Problems and support data-

driven decision making.

## Symbols & Their Meaning

 Target: Define the goal or objective

 Database: Represents data storage

 Funnel: Data analysis & insights

 Bar chart: Data analysis & insights

 cloud: Deployment / Real-world application

 LOOP: Continuous improvement

 Shield: Data quality & reliability
